## Abstracts

Polypropylene is one of the most economical types of plastic pipe fittings. It offers a number of the benefits of more expensive PTFE good resistance to both basic and acidic chemicals. PP-lined piping can be used safely in temperatures up to 225°F. It possesses some abrasion resistance and becomes brittle at lower temperatures. The chemical industry is a significant consumer of polypropylene lined pipes due to the corrosive nature of many chemicals. As the chemical industry expands globally, there is an increased demand for corrosion-resistant materials, driving the market for PP lined pipes. Stringent environmental and safety regulations require industries to implement corrosion-resistant materials to prevent leaks and spills. Polypropylene lined pipes meet these regulatory requirements, especially in chemical processing plants and industrial facilities.
