## Abstracts

The polystyrene foam reducing machine is a mechanical environmental protection equipment that squeezes foam plastics based on the principle of spiral rotation to generate pressure and perform cold compression treatment on them. When in use, the operator only needs to throw the foam into the hopper, and the equipment's tearing and crushing mechanism will crush the foam and compress it with a spiral, and then the spiral mechanism will process it to produce square foam plastic compressed blocks.

The global Polystyrene Foam Reducing Machine market size was estimated at USD 818.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.
