Report Overview

Polystyrene is a synthetic polymer, made from mono styrene. It is aromatic and can be solid or foamed. Polystyrene is generally hard, clear and brittle. It has low melting point and poor resistivity to oxygen. Also, it has low cost in terms of resin per unit weight. It is a vinyl polymer that means it has an extended hydrocarbon chain with a phenyl group attached to every carbon atom. It is the most commonly used plastic and finds application in protective packaging, containers, lids, bottles and in the making of models.

The global market for polystyrene has shown tremendous potential especially in developing economies like China, India, Brazil, and Russia amongst others. Since polystyrene is used in a variety of products, the demand is expected to grow at a rapid rate. Packaging, construction, and consumer electronic industries are the major consumers for polystyrene and the growth is expected to remain high with the constant rise in population. Other major regions like North America and Europe are expected to have a constant demand for polystyrene for the next six years. The major applications of polystyrene include packaging, consumer electronics, construction, medical, and home appliances etc. The durability of the product, its range of hardness, flexibility as well as its cost-effectiveness makes it a popular material in a wide range of products.
