## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polysulfonamide Fiber Monomer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The monomers for polysulfonamide (PSA) fiber primarily include 4,4'-diaminodiphenyl sulfone (4,4'-DDS), 3,3'-diaminodiphenyl sulfone (3,3'-DDS), and terephthaloyl chloride (TPC). These monomers undergo low-temperature polycondensation to form the PSA polymer, which is then processed into fibers through wet spinning and high-temperature drawing. PSA fibers exhibit exceptional heat resistance, flame retardancy, electrical insulation, and radiation resistance, making them ideal for high-temperature protective clothing such as space suits, specialized military uniforms, and firefighting gear, as well as for insulation materials in motors and transformers. Additionally, PSA fibers are suitable for high-temperature filtration materials and thermal protective textiles, indicating a broad range of applications.

The global Polysulfonamide Fiber Monomer market size was estimated at USD 115.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.70% during the forecast period.
