Abstracts

Polytetrafluoroethylene (PTFE) fine powder is a high-performance thermoplastic polymer powder with extremely fine particle sizes. It is composed of repeating units of tetrafluoroethylene monomers (-CF₂-CF₂-) linked together to form long molecular chains. PTFE fine powder exhibits unique physical and chemical properties due to its highly fluorinated structure. It has an extremely low coefficient of friction, excellent chemical resistance, high thermal stability, and good electrical insulation properties. These characteristics make it widely used in various industries. In the manufacturing of seals and gaskets, its low friction coefficient helps reduce wear and tear. In the coating industry, it can be used to create non-stick coatings on cookware and other surfaces. In the electrical field, its good insulation properties are utilized for insulating materials. Additionally, it is also applied in some high-precision manufacturing processes due to its fine particle size and uniform distribution.

The global Polytetrafluoroethylene Ptfе Fine Powder market size was estimated at USD 1057.67 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
