Abstracts

Polytetrafluoroethylene suspension resin is a type of resin primarily composed of polytetrafluoroethylene (PTFE), prepared through a suspension polymerization process. In this process, the PTFE raw material is dispersed in water with the help of a suspending agent to form fine particles which are then polymerized to create uniform resin particles. This resin retains the original properties of PTFE, such as outstanding chemical stability, heat resistance, electrical insulation, and low coefficient of friction, while also possessing good processability suitable for processes like extrusion and compression molding. It is commonly used in the production of products that require high temperature resistance, chemical resistance, and excellent electrical insulation properties.

The global Polytetrafluoroethylene Suspension Resin market size was estimated at USD 515.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
