Abstracts

Polythene disposable gloves are single-use protective coverings made from low-density polyethylene (LDPE), a lightweight and economical plastic material. They are designed to act as a barrier against contaminants, primarily in non-hazardous and low-risk environments such as food handling, light cleaning, janitorial services, and basic hygiene applications. These gloves are typically manufactured using a blown film extrusion process, resulting in a loose-fitting, ambidextrous design that prioritizes ease of use and disposability over durability or chemical resistance. While they offer minimal protection compared to nitrile or latex alternatives, their key advantages include low cost, high availability, and suitability for tasks requiring frequent glove changes or short-term use.

The global Polythene Disposable Glove market size was estimated at USD 2871.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.85% during the forecast period.
