Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polythiol Epoxy Curing Agent competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Polythiol epoxy curing agents are additives that rapidly cure epoxy resins at room temperature or low temperatures. Their main characteristics are rapid curing speed, typically reaching usable strength within minutes, and suitability for low-temperature and humid environments. Upstream raw materials include epoxy resin, 3-mercaptopropionic acid, and pentaerythritol. Downstream applications span multiple industries, including electronics, automotive manufacturing, construction, and aerospace. Global sales in 2024 were approximately 18,000 tons, with an average market price of approximately US\$7,800 per ton. Industry gross profit margins range from 15% to 30%. Polythiol epoxy curing agents are indispensable in applications requiring high-efficiency production due to their excellent low-temperature, rapid curing properties. Simultaneously, increasingly stringent global environmental regulations are driving market demand for high-efficiency polythiol systems with low odor and low volatile organic compounds (VOCs). The production of polythiol epoxy curing agents requires advanced technology. Currently, manufacturers in Europe, the United States, and Japan lead in terms of production capacity and technological development. The relatively high price of polythiol curing agents directly limits their widespread application in cost-sensitive sectors.

The global Polythiol Epoxy Curing Agent market size was estimated at USD 140.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
