Report Overview:

Polyurethane Catalyst can be divided into two broad classes: gelling catalysts and blowing catalysts. Gelling catalysts are more selective to catalyzing the reaction of the isocyanate with hydroxyl groups, whereas blowing catalysts are foaming catalysts; Blowing catalysts are more selective to catalyzing the reaction of the isocyanate with water to produce foam. When formulating a polyurethane foam system, it is important to have the correct ratio of gelling and blowing catalysts. If the ratio of gelling and blowing catalysts is incorrect, the foam will either lack physical integrity, or will be too dense.

The Global Polyurethane Catalysts Market Size was estimated at USD 1651.82 million in 2023 and is projected to reach USD 2356.44 million by 2029, exhibiting a CAGR of 6.10% during the forecast period.
