Abstracts

Polyurethane coated wheels are industrial-grade wheels featuring a polyurethane coating or complete construction, designed to provide superior durability, load-bearing capacity, and resistance to abrasion, chemicals, and environmental factors compared to traditional rubber or plastic wheels. These wheels are engineered to minimize floor damage, reduce noise during operation, and offer excellent rebound resilience, making them ideal for heavy-duty applications in material handling equipment, industrial carts, forklifts, and medical devices where smooth rolling, high traction, and long service life are critical. The polyurethane material can be formulated in varying hardness levels (measured in durometer) to balance flexibility and wear resistance based on specific operational requirements.

The global Polyurethane Coated Wheel market size was estimated at USD 1540.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
