Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Polyurethane Cold Chain Containers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Polyurethane Cold Chain Containers production reached approximately 933.5k units, with an average global market price of around US\$ 185 per unit. In 2024, the single-line production capacity of polyurethane cold chain containers will be 30,000 units per year. The industry's gross profit margin is approximately 20.8%. Polyurethane Cold Chain Containers are specialized low-temperature storage and transportation equipment using polyurethane as the core insulation layer. Essentially, they leverage the physical properties of polyurethane rigid foam to create a closed, low-temperature environment, enabling temperature control for perishable goods during production, processing, transportation, and sales. Produced through a chemical foaming reaction between isocyanate and polyol, this material forms a honeycomb structure with a closed-cell ratio exceeding 90%, resulting in low thermal conductivity and effectively blocking heat transfer from the outside. The global supply chain for polyurethane cold chain containers (PCCs) is highly concentrated and characterized by regional synergy. On the upstream raw material supply side, multinational companies such as Wanhua Chemical, BASF, and Covestro dominate, accounting for over 60% of the global production capacity of polyurethane raw materials (MDI, TDI, and polyether polyols), forming an oligopoly. These companies enhance product value through technological advancements (such as low-VOC and bio-based polyurethanes), meeting the cold chain industry's demands for environmental friendliness and weather resistance. The downstream biopharmaceutical industry is a core customer for PCCs, driven by the stringent 2-8°C refrigeration requirements for vaccines and biologics. Polyurethane containers, with their low thermal conductivity and

strong impact resistance, are the preferred insulation solution for the pharmaceutical cold chain. For example, companies such as DGP Intelsius LLC have customized vaccine transport boxes for pharmaceutical companies such as Pfizer and Moderna. These boxes utilize a composite structure of VIP vacuum insulation panels and PCC to ensure temperature control for over 72 hours. With the global biopharmaceutical market exceeding \$500 billion, demand for PCCs in the pharmaceutical cold chain is growing at an annual rate of 15%, further driving the penetration of PCCs in the high-end market.

The global Polyurethane Cold Chain Containers market size was estimated at USD 173.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
