Abstracts

Polyurethane elastomer is an elastic material made of polyurethane polymer, which has excellent elasticity, wear resistance and tear resistance. Polyurethane elastomer is a variety of polyurethane synthetic materials (other varieties refer to polyurethane foam plastics, polyurethane adhesives, polyurethane coatings and polyurethane fibers). Polyurethane elastomer is a polymer material that combines the advantages of rubber and plastic. Its molecular structure contains hard segments and soft segments. The hard segments provide mechanical strength, and the soft segments give the material elasticity and flexibility, which makes polyurethane elastomer suitable for a variety of applications. Polyurethane elastomers are versatile materials widely used in various industries due to their exceptional mechanical properties, including high elasticity, abrasion resistance, and chemical stability. The global market is driven by demand in automotive, construction, footwear, and industrial applications. Innovations such as bio-based polyurethane elastomers and lightweight formulations are gaining traction, driven by sustainability trends. The Asia-Pacific region, especially China and India, dominates the market owing to rapid industrialization and urbanization. Meanwhile, developed markets in North America and Europe focus on high-performance and specialty applications. The industry faces challenges such as fluctuating raw material prices and environmental regulations, which are pushing manufacturers toward greener alternatives.

The global Polyurethane Elastomers market size was estimated at USD 6453.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
