Report Overview:

Polyurethane flange sealant is a type of sealant produced for various types of mechanical flanges used to fill gaps or spaces between a set of flanges. These flanges consist of raised rings around the edges of a pipe that are used to join multiple sections of piping together via compression. As the connecting link of mechanical parts, flanges are easily damaged by mechanical shock or chemically corroded by the medium. Therefore, a good flange sealant can help flanges work better and longer without compromising mechanical properties.

The Global Polyurethane Flange Sealants Market Size was estimated at USD 2913.10 million in 2023 and is projected to reach USD 4062.61 million by 2029, exhibiting a CAGR of 5.70% during the forecast period.
