Abstracts

A polyurethane flat screen is a flat - shaped screen plate made of polyurethane material. Polyurethane is a polymer material with good comprehensive properties, featuring high elasticity, wear resistance, corrosion resistance, impact resistance, etc. This screen plate has regularly arranged screen holes on its surface, and the shape, size and spacing of the holes are designed according to different screening requirements. It is mainly used in various screening equipment and plays an important role in the material screening operations of industries such as mining, coal, metallurgy and chemical engineering. It can screen and classify materials of different particle sizes, effectively separating the materials that meet the particle size requirements. Due to the characteristics of the polyurethane material, it has a longer service life, lower noise and better screening performance compared with traditional screen plates.

The global Polyurethane Flat Screen market size was estimated at USD 107.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
