Abstracts

Polyurethane foam dressings are advanced wound care products composed of a soft, highly absorbent polyurethane foam layer that is typically backed by a waterproof or semi-permeable film, designed to manage moderate to heavy exudate while maintaining a moist wound healing environment; these dressings are characterized by their ability to absorb fluid into the foam matrix, minimize maceration of surrounding skin, provide thermal insulation, and often incorporate adhesive borders for secure placement, making them suitable for a variety of wounds including pressure ulcers, diabetic foot ulcers, surgical wounds, and traumatic injuries where exudate management and protection are critical.
