Abstracts

Polyurethane is a kind of polymer composed of organic units connected by carbamate bonds. Polyurethane in automobile filter refers specifically to polyurethane used in automobile filter. Polyurethane in automotive filter is a common filter material. Polyurethane is a polymer material with good mechanical strength, chemical stability and wear resistance, so it is widely used in various filters. Car filters usually include air filters, oil filters, fuel filters, etc. Among them, polyurethane for air filters can be used as components such as filters, filter elements or filter materials to filter dust, particles and other pollutants in the air entering the engine. Compared with traditional filter materials, such as paper filter elements, polyurethane has better filtration efficiency and longer service life. It filters out finer particles while being less likely to clog or wear out, helping to extend the life of the filter. In addition, polyurethane also has good oil resistance and high temperature resistance, and is suitable for use in automobile engines in high temperature environments. Therefore, polyurethane has become a commonly used filter material in the automotive manufacturing industry.

The global Polyurethane in Automotive Filter market size was estimated at USD 124.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
