Abstracts

In interventional therapy, the flexibility and durability of the catheter are crucial. Polyurethane materials are widely used in interventional therapy catheters, including cardiac catheters, vascular catheters, and urinary catheters, due to their high flexibility and strength. Polyurethane catheters can pass smoothly through the complex anatomical structure of the human body without causing damage to the tissue. In addition, the wear resistance and biocompatibility of polyurethane ensure that the catheter can maintain good performance during long-term use in the body and will not cause immune response, making it an ideal choice for long-term implantation.
