Abstracts

Polyurethane polishing pads are specialized abrasive tools used primarily in the automotive, marine, and industrial finishing sectors for surface preparation, polishing, and buffing applications. These pads are constructed from polyurethane foam or a combination of polyurethane and abrasive grains, offering durability, flexibility, and consistent performance across various materials such as paint, clear coats, gel coats, and metals. Their design allows for efficient material removal, high-gloss finishing, and reduced swirl marks compared to traditional wool or foam pads, making them a preferred choice among detailers, refinishers, and manufacturers seeking precision and efficiency in surface treatment processes.

The global Polyurethane Polishing Pad market size was estimated at USD 154.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
