Abstracts

Polyurethane yacht coatings are specialized marine finishes formulated with polyurethane resins to provide exceptional durability, UV resistance, and aesthetic appeal for boat surfaces above the waterline. These coatings typically consist of a two-component system—a base resin and a hardener—which, when mixed, undergo a chemical reaction to form a tough, flexible, and highly protective film. Key characteristics include excellent gloss retention, resistance to abrasion, chemicals, and weathering, as well as the ability to maintain color integrity in harsh marine environments. They are applied as topcoats over primers or existing finishes to enhance longevity and visual quality, making them a premium choice for both recreational and commercial vessels seeking superior performance and appearance.

The global Polyurethane Yacht Coating market size was estimated at USD 440.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.85% during the forecast period.
