Abstracts

Polyvinyl chloride (PVC) blister film is mainly made of vinyl chloride monomer polymerization and is one of the commonly used thermoplastics. Through specific processes, such as calendering or blow molding, it can be made into a film for packaging materials. As a pharmaceutical packaging material, PVC blister film needs to have certain heat resistance, cold resistance and barrier properties to protect the medicine from the external environment. Due to its sturdy properties, PVC blister film is widely used in the packaging of a variety of products, such as medicines, electronic products and toys. In pharmaceutical packaging, PVC blister film is usually used in combination with aluminum foil to form aluminum-plastic blister packaging, which provides better protection for drugs.
