Abstracts

Polyvinylidene Dichloride (PVDC) is a synthetic, high-performance polymer known for its exceptional barrier properties against gases, moisture, and organic solvents, as well as its chemical resistance and thermal stability. It is commonly used as a coating or as a copolymer in multilayer packaging films, particularly for food and pharmaceutical applications, where it helps extend shelf life by preventing oxygen and water vapor transmission. PVDC is also utilized in non-packaging sectors such as flame-retardant materials, wire and cable insulation, and specialty membranes, owing to its durability and low permeability characteristics.

The global Polyvinylidene Dichloride market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
