Abstracts

An optical power meter (OPM) is a handheld electronic device used to measure the power of an optical signal transmitted through fiber optic cables, typically expressed in decibels (dB) or watts (W). It functions by connecting directly to the fiber via standard connectors (such as FC, SC, or LC) and employs a calibrated photodetector to convert light intensity into an electrical signal, which is then processed and displayed. OPMs are essential tools in telecommunications, data centers, and broadband networks for verifying signal integrity, testing loss in splices and connectors, commissioning new lines, and troubleshooting degraded performance, ensuring optimal functionality and efficiency of fiber optic infrastructure.

The global Pon Optical Power Meter market size was estimated at USD 32.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
