Abstracts

Porcelain rod insulators are high-strength insulating components used in power lines and equipment, mainly made of high-strength electric porcelain materials and equipped with metal end fittings. They are commonly used in transmission and distribution lines, substations, railway electrification and other high-voltage applications to provide good electrical insulation performance and mechanical support. Porcelain rod insulators have strong compression, bending and tensile properties, as well as excellent weather resistance, and can operate stably for a long time in harsh environments. Compared with composite insulators, porcelain rod insulators have a longer service life and better high temperature and corrosion resistance, and are widely used in high-voltage and ultra-high-voltage transmission systems.

The global Porcelain Rod Insulators market size was estimated at USD 329.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
