Abstracts

Plasma powder is a high-quality animal protein source that can be used to improve the texture of extrudates, chunks, and pate. It has a protein content of more than 70%, a fat content of less than 2.5%, and a mineral content of 2%. It is a completely digested component with a modest calorific content (4 kcal/g). Porcine is called Pork flesh which has a strong nutritional profile in addition to being tasty. Porcine-derived spray-dried plasma is rich in protein and a popular ingredient in canned pet food due to its physicochemical qualities. Pet food producers are concerned about the increase in demand for new ingredients, as well as the increase in the adoption of pets. Furthermore, ingredient considerations are a crucial issue in boosting pet food palatability, particularly for cats, in creating the optimum texture.
