## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Porous Coating High Flux Tubes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Porous Coating High Flux Tubes are heat exchange tubes with a porous layer formed on the surface through powder metallurgy sintering, significantly enhancing heat transfer efficiency. This design, by forming interconnected pockets and pores, significantly improves boiling heat transfer performance, enabling smaller heat exchangers and higher efficiency. These tubes are widely used in fields such as oil refining, petrochemicals, and coal chemical industry. The upstream sector of the industry chain primarily comprises the steel industry, which provides a variety of raw materials for the manufacture of high-throughput heat exchange tubes, such as stainless steel plates, carbon steel plates, special-material tubes, and forgings. The quality and performance of these materials directly determine the corrosion resistance, high-temperature resistance, and structural strength of the final product. The downstream sector encompasses all energy-intensive process industries with extremely high demands for heat exchange efficiency, primarily concentrated in oil refining and petrochemicals, modern coal chemical industry, and basic chemical industry. Global sales in 2024 are expected to be approximately 26,000 tons, with an average market price of approximately US\$10,000 per ton. Single-line production capacity varies depending on the production process and investment in the production equipment, typically ranging from 1,000 to 5,000 tons per year, with industry gross profit margins ranging from 25% to 50%.

The global Porous Coating High Flux Tubes market size was estimated at USD 260.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

6.70% during the forecast period.
