Abstracts

Porous copper foil is a type of copper material that has been intentionally engineered to have a network of small, interconnected pores or holes throughout its structure. These pores or voids can vary in size and density, depending on the specific application and manufacturing process.

Increased Demand for Lithium-ion Batteries: Porous copper foils are a critical component in lithium-ion batteries used in electric vehicles (EVs), consumer electronics, and renewable energy storage. The growing demand for EVs and renewable energy solutions was driving the need for porous copper foils to improve battery performance.

Miniaturization of Electronics: The trend toward smaller and more compact electronic devices, such as smartphones, wearables, and IoT devices, required thinner and more efficient materials. Porous copper foils with improved conductivity and porosity were in demand for these applications.

Sustainability and Energy Efficiency: Industries were increasingly focused on sustainability and reducing their carbon footprint. Porous copper foils with better conductivity and thermal management properties played a role in making electronic devices more energy-efficient.

Advancements in Manufacturing Technology: Innovations in manufacturing processes for porous copper foils, such as roll-to-roll manufacturing and electrodeposition techniques, were helping reduce production costs and improve product quality.

Asia-Pacific Dominance: The Asia-Pacific region, particularly China, Japan, and South Korea, had a significant presence in the porous copper foil market. The growth of electronics manufacturing and the EV industry in this region contributed to its dominance.

The global Porous Copper Foil market size was estimated at USD 1604.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
