Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Porous Plastic Sheets competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Porous Plastic Sheets are sheet materials with a large number of microscopic pores formed by physical or chemical foaming process based on synthetic resin (such as polyethylene, polypropylene, polyurethane, etc.). The core feature is that the three-dimensional interconnectivity of the pore structure gives the material light weight, sound absorption, shock absorption (and fluid penetration/filtration) and other properties, and through closed-cell, open-cell or mixed-pore design and thermoplastic, thermosetting or elastomer substrate selection, it can achieve diversified application needs such as structural bearing, separation or filtration.

The global Porous Plastic Sheets market size was estimated at USD 142.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
