Abstracts

As a key link connecting global trade, the cargo throughput of ports continues to soar. The annual throughput of some busy ports in my country has exceeded hundreds of millions of tons. Under this huge logistics pressure, the disadvantages of the traditional port transportation model have become increasingly prominent. Taking manpower dependence as an example, the younger generation has little interest in port driver positions due to high work intensity and poor environment. This not only makes it difficult for companies to recruit, but also causes labor costs to continue to rise. At the same time, manual driving is affected by factors such as driver fatigue and emotions, and the transportation efficiency fluctuates significantly. Safety accidents caused by human errors occur from time to time, causing huge losses to port operations. Against this background, the intelligent transformation of ports is imminent. The smart port unmanned driving solution refers to the integration of advanced technologies such as autonomous driving technology, 5G communication, artificial intelligence, and the Internet of Things to achieve the automation and intelligent operation of horizontal transportation equipment (such as container trucks, straddle carriers, AGVs, etc.) in the port, thereby improving port operation efficiency, reducing labor costs, improving safety, and promoting the transformation of ports to green, low-carbon, and intelligent directions. In the field of port autonomous driving, the construction of technical barriers is crucial. At present, the industry has formed two major competitive models: Sinian Intelligent Driving's "intelligent driving system + self-developed components + customized chassis + vehicle-road-cloud integration" full-stack solution, and Xijing Technology's "new energy + autonomous driving" hardware and software integrated Q-Truck model.

The global Port Autonomous Driving Solutions market size was estimated at USD 1587.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 43.50% during the forecast period.
