Abstracts

Port Digital Twin is a dynamic mirror system built in virtual space that perfectly corresponds to the real port, utilizing digital modeling and IoT technologies. It integrates geographic information, equipment status, cargo flow, and environmental data to achieve real-time visualization and precise mapping of all elements, including terminals, ships, quay cranes, and storage yards. This solution can dynamically simulate and optimize port operation processes, with core applications in intelligent scheduling, pre-operation drills, predictive maintenance, and energy management. This significantly improves port operational efficiency, safety, and decision-making, making it a key infrastructure for building automated and intelligent ports of the future. The global development of Port Digital Twin exhibits a distinct regional hierarchy. Leading ports in Europe and Asia (such as Rotterdam, Singapore, and Shanghai Yangshan) are the core sources of technological innovation, with applications evolving from visual monitoring to operational optimization and autonomous decision-making, aiming to address high operating costs and land resource constraints. The Chinese market is experiencing the most rapid growth, driven by the national strategy for smart ports and large-scale new infrastructure construction, focusing on end-to-end automation and efficiency improvement. North America and the Middle East follow closely, investing in port resilience and supply chain visibility. Latin America and Africa are in the early exploratory stages, with their development level closely related to the modernization process and investment capacity of local ports. Overall, the technology is moving from pilot demonstrations to large-scale deployment, and its maturity is directly proportional to the strategic importance of ports in each region and their digitalization investment.

The global Port Digital Twin market size was estimated at USD 915.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
