Report Overview:

The air shower is a kind of local purification equipment with strong versatility, which is installed between the clean room and the non-clean room. When people and goods want to enter the clean area, they need to be blown through the air shower room. The clean air blown out can remove the dust carried by people and goods, and can effectively block or reduce the dust source from entering the clean area. The front and rear doors of the air shower/cargo shower are electronically interlocked, which can also act as an airlock to prevent unpurified air from entering the clean area.

Features of the Portable Air Shower are very easy to assemble and install, no need for wall installation. Since there is no need for extensive installation work, the initial cost can be kept low. Compact design saves space. Lightweight, easy to move and disassemble. It can be used even in places where it cannot be introduced due to installation space.

The Global Portable Air Shower Market Size was estimated at USD 509.24 million in 2023 and is projected to reach USD 629.62 million by 2029, exhibiting a CAGR of 3.60% during the forecast period.
