### Report Overview

Adenosine triphosphate (ATP) is an enzyme that is present in all living cells, and an ATP monitoring system can detect the amount of organic matter that remains after cleaning an environmental surface, a medical device or a surgical instrument. Hospitals are using ATP-based sanitation monitoring systems to detect and measure ATP on surfaces as a method of ensuring the effectiveness of their facilities' sanitation efforts. The amount of ATP detected, and where this ATP was detected, indicates areas and items in the health care setting that may need to be recleaned, and the possible need for improvement in a health care facility's cleaning protocols.
