Abstracts

The portable chainsaw mill is a specialized woodworking tool designed to transform a standard chainsaw into a mobile sawmill, enabling users to process logs directly at the felling site or in remote locations. It typically consists of a rigid frame that attaches to the chainsaw bar, guiding it along a straight path to produce uniform lumber, slabs, or beams from raw timber. This equipment appeals primarily to small-scale sawyers, homesteaders, DIY enthusiasts, and forestry professionals seeking cost-effective, on-site milling solutions without the investment in industrial machinery. Its portability, versatility in handling various log sizes, and ability to utilize existing chainsaws contribute to its functionality, though operational efficiency depends on the power of the chainsaw, user skill, and log conditions.

The global Portable Chainsaw Mill market size was estimated at USD 150.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
