## Abstracts

The portable circumferential beam X-ray source is an X-ray emitting device designed for field use. It can radiate X-rays simultaneously on a 360° circumference perpendicular to the axis of the X-ray tube. This design makes it particularly suitable for detecting annular welds of large-diameter pipes and spherical containers. The flaw detection photography of the entire weld can be completed with one exposure, thus significantly improving the detection efficiency.

The global Portable Circumferential Beam X-ray Source market size was estimated at USD 535.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
