### Report Overview

The portable CNC plasma cutting machine is a CNC cutting equipment that uses high-temperature plasma sparks to cut metal materials. It usually consists of cutting machine tools, guide rails, power systems, control systems, and plasma cutting guns. This equipment not only has the characteristics of high efficiency, accuracy and stability, but also has the advantages of portability and flexibility. The working principle of the portable CNC plasma cutting machine is to use the plasma arc generated by the gas discharge to cut the metal material into the desired shape. During the cutting process, the gas is injected into the plasma cutting torch, and the high-temperature plasma generated by the arc melts the metal material, and blows it away through the high-pressure airflow, thereby completing the cutting operation.
