Abstracts

A portable desktop range hood is a compact, self-contained ventilation device designed to capture and filter cooking fumes, smoke, and odors directly at the source, typically placed on countertops or desktops near small cooking appliances such as induction cooktops, electric grills, or hot plates. Unlike traditional built-in range hoods, these units are freestanding, lightweight, and often feature multi-stage filtration systems?commonly including aluminum mesh, activated carbon, and sometimes HEPA filters?to purify air before recirculating it indoors or, in some models, venting it externally via a flexible duct. They cater to environments with limited space or ventilation options, such as small apartments, dormitories, offices, RVs, or outdoor kitchens, offering an energy-efficient and flexible solution to improve indoor air quality without requiring permanent installation or structural modifications.

The global Portable Desktop Range Hood market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
