Report Overview

Dew Point Instruments are instruments that can directly measure dew point temperature. Cool a mirror surface in the humid air of the sample until the moment when dew drops (or ice crystals) appear on the mirror surface, measure the average temperature of the mirror surface, which is the dew point (frost) temperature. It has high humidity measurement accuracy, but requires a highly smooth mirror surface, a highly accurate temperature control system, and a highly sensitive optical detection system for dew drops (ice crystals). The pipe that inhales the sample air must be kept clean during use, otherwise impurities in the pipe will absorb or release moisture and cause measurement errors.
