Abstracts

A portable electric winch is a compact, self-contained motorized device designed for pulling, lifting, or dragging heavy loads across short to moderate distances, typically operated via a handheld remote control or integrated switch and powered by a built-in rechargeable battery or external power source such as a vehicle's 12V outlet. These winches are characterized by their mobility, ease of installation, and versatility across a range of applications, including off-road vehicle recovery, marine use for anchoring or loading, construction and agricultural tasks, and recreational activities like camping or hunting. Key functional components include a durable synthetic or steel cable (or rope) spooled on a drum, a geared motor for mechanical advantage, and often features such as automatic braking, load monitoring, and weather resistance to ensure safety and reliability in varied environments. Their design prioritizes portability—often with carrying handles, compact frames, and lightweight materials—making them suitable for users who require powerful pulling capability without the permanence or bulk of industrial-grade winching systems.

The global Portable Electric Winch market size was estimated at USD 550.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
