Abstracts

Portable hospital screens, also known as medical privacy screens or hospital room dividers, are mobile, freestanding partitions designed to create temporary, flexible barriers within clinical and healthcare environments to ensure patient privacy, infection control, and space optimization. These units typically feature lightweight yet sturdy frames—often made of aluminum or steel—with panels constructed from materials such as flame-retardant fabric, antimicrobial vinyl, or transparent polycarbonate, and are mounted on wheels or casters for easy maneuverability. They are engineered to meet healthcare standards for durability, cleanability, and safety, serving essential functions in emergency departments, patient wards, outpatient clinics, and triage areas by visually and physically separating treatment zones, shielding patients during examinations or procedures, and helping to manage foot traffic and exposure risks.
