Abstracts

Instant hot water dispenser is a high-tech intelligent water dispenser that does not require waiting, and can be used to dispense hot water as soon as it is pressed, without repeated heating. Its working principle is to use the control module to control the water pump, and continuously inject cold water into the heating body with strong thermal conductivity (such as thick film, ceramic, glass tube, metal tube). At the same time, the control module connects the heating power supply of the heater, and the cold water is heated while flowing through the heater. What flows out through the pipe is hot water, and the temperature of the hot water can be controlled. This report studies a portable instant hot water dispenser that can be carried with you and heated as soon as it is turned on.

The global Portable Instant Hot Water Dispenser market size was estimated at USD 64.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
