Abstracts

Portable metrology equipment has seen a dramatic rise in its role of supporting manufacturing over the past decade with applications including reverse engineering, prototype part inspection, low volume production measurements, tooling and fixture inspection and alignment, interrogation of product quality issues etc. One significant characteristic of all portable metrology equipment is its ability to be used at the ?point of manufacture?, on the production floor, providing an almost immediate feedback of measurement data. With all the media and exhibition focus these days on smart factories, with in-process, fully-integrated and closed-loop measurement systems, it may be a little surprising to witness that portable metrology equipment suppliers continue to grow their businesses with future years growth projections of the sector remaining in the 8% CAGR range. Portable metrology equipment, in the main, is manually operated which appears at odds with the predicted future of fully automated manufacturing with closed loop, fully integrated, metrology. The reason for its continued growth being that many companies and their manufacturing process continue on in the traditional mode and the overwhelming benefits of portable ?on-demand? measurements are compelling.

The global Portable Metrology Equipment market size was estimated at USD 438.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.60% during the forecast period.
