Abstracts

A portable narcotics scanner is a handheld or compact device designed to rapidly detect and identify the presence of illicit or controlled substances such as cocaine, heroin, methamphetamine, fentanyl, or cannabis, typically through non-invasive or minimally invasive methods such as surface sampling, vapor detection, or spectroscopy-based analysis. These devices are primarily utilized by law enforcement, border security, customs agencies, and private security personnel to conduct on-site screenings without the need for laboratory testing, enabling real-time decision-making in field operations, cargo inspections, or public safety interventions. Advanced models may employ technologies like ion mobility spectrometry (IMS), Raman spectroscopy, or mass spectrometry to provide high specificity and sensitivity, often with the capability to detect trace amounts of substances even through packaging or other barriers, thereby enhancing operational efficiency and reducing risks associated with manual handling or delayed results.

The global Portable Narcotics Scanner market size was estimated at USD 315.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
