Abstracts

Portable neutron generators are compact, self-contained devices that produce neutrons through nuclear fusion reactions, typically using deuterium-deuterium (D?D) or deuterium-tritium (D?T) fusion, and are designed for field deployment in applications such as oil and gas well logging, nuclear material detection, security screening, and scientific research. Unlike reactor-based or isotopic neutron sources, these generators offer on-demand neutron production, can be turned on and off, reduce radioactive waste concerns, and provide tunable neutron energy levels, making them valuable tools where mobility, safety, and controllability are critical.

The global Portable Neutron Generator market size was estimated at USD 480.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
