## Abstracts

Portable oxygen detectors are compact, handheld or wearable devices designed to measure and monitor ambient oxygen levels in real-time, primarily for safety purposes; they operate using electrochemical or optical sensors to detect oxygen concentration, typically alerting users through audible, visual, or vibrating alarms when levels fall below a safe threshold (usually around 19.5% oxygen by volume) or rise to potentially hazardous concentrations. These devices are essential in environments where oxygen deficiency or enrichment poses risks, such as confined spaces, industrial settings, laboratories, mining operations, and emergency response scenarios, ensuring compliance with occupational safety standards and preventing accidents related to asphyxiation or combustion.

The global Portable Oxygen Detectors market size was estimated at USD 1020.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
