Abstracts

A portable oxygen generator is a medical device that utilizes advanced technology, such as pressure swing adsorption or membrane separation, to extract and concentrate oxygen from ambient air, providing on-demand respiratory support for individuals with conditions like chronic obstructive pulmonary disease (COPD), pulmonary fibrosis, or other respiratory insufficiencies. These devices are designed to be compact, lightweight, and battery-powered, enabling greater mobility and independence compared to traditional stationary oxygen concentrators or oxygen tanks. Unlike compressed or liquid oxygen systems, portable oxygen generators do not require refills, as they produce medical-grade oxygen (typically 90-95% purity) directly from the surrounding environment, making them a self-sustaining solution for users who require supplemental oxygen during daily activities, travel, or emergencies.

The global Portable Oxygen Generator market size was estimated at USD 900.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
