Abstracts

Portable ozone sterilizers are compact, often battery-powered or USB-rechargeable devices designed to generate ozone (O₃), a highly reactive gas composed of three oxygen atoms which acts as a potent oxidizing agent to eliminate airborne and surface-based microorganisms, including bacteria, viruses, mold spores, and odors. These devices function by converting ambient oxygen into ozone through methods such as corona discharge or ultraviolet light, releasing it into enclosed spaces like cars, hotel rooms, closets, or small storage areas to disinfect and deodorize without the use of liquid chemicals. They are marketed for personal and small-space use, emphasizing convenience, chemical-free sanitation, and portability, though efficacy varies based on ozone concentration, exposure time, and proper ventilation due to potential health risks associated with ozone inhalation.

The global Portable Ozone Sterilizer market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
