Abstracts

A Portable Pilot Unit (PPU) is a compact, self-contained navigation and communication system designed for use by marine pilots to enhance situational awareness and operational safety during vessel maneuvering in confined or complex waterways. Typically equipped with GPS, radar, AIS (Automatic Identification System), electronic chart display (ECDIS), and communication interfaces, a PPU provides real-time data on the vessel's position, movement, and surrounding traffic, enabling pilots to make informed decisions independently of the ship's bridge systems. These units are portable, allowing pilots to carry them between vessels, ensuring consistent and reliable navigational support regardless of the ship's equipment quality or compatibility. The core function of a PPU is to serve as a redundant or supplementary tool that mitigates risks associated with pilotage, particularly in challenging conditions such as poor visibility, heavy traffic, or unfamiliar ports.

The global Portable Pilot Unit (Ppu) market size was estimated at USD 120.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
