Report Overview:

A portable Raman spectrometer is a hand held tool used to identify or verify the components of a sample. Pharmaceutical labs use portable Raman spectrometers to verify that drugs and/or the components for manufacturing them are what they are labeled to be and forensic labs use portable Raman spectrometers to identify unknown substances. The portable Raman spectrometer collects light emitted from a sample after it is hit with a laser and with the collected light creates a spectrum that is used to identify the material . What makes the Raman spectrometer different from other spectrometers is that is can be used to identify samples through clear packing materials, so workers are protected from exposure to pharmaceutical active or harmful substances.
