Abstracts

A portable single post lift is a mobile hydraulic lifting device designed to elevate vehicles or heavy equipment for maintenance, inspection, or storage purposes, characterized by its compact, freestanding structure that operates independently without requiring permanent installation or embedded flooring. Unlike traditional two-post or four-post lifts, it offers flexibility in positioning within a workshop or garage and can be relocated as needed, typically featuring a low-profile design to accommodate vehicles with limited ground clearance and utilizing either mechanical or hydraulic locking mechanisms to ensure stability and safety during use. These lifts are engineered to support substantial weight capacities, often ranging from several thousand to over ten thousand pounds, while maintaining a small physical footprint, making them particularly valuable in space-constrained environments or for mobile service operations where versatility and ease of deployment are prioritized.

The global Portable Single Post Lift market size was estimated at USD 180.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
