A portable smoke machine, also known as a fog machine, is a compact, mobile device designed to generate artificial smoke or fog effects by vaporizing a specialized fluid (fog juice) through a heating element, creating a dense, low-lying mist commonly used for visual enhancement in entertainment, photography, events, and atmospheric simulations. These devices are characterized by their lightweight construction, battery or rechargeable power options, and ease of transport, making them suitable for both professional applications?such as concerts, theater productions, and film sets?and consumer uses like Halloween decorations, parties, and artistic projects.
