Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Portable Wireless POS Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A portable wireless POS (Point of Sale) machine is a mobile device used to process transactions in retail or service environments without the need for a physical connection to a traditional point of sale system. In 2024, global Portable Wireless POS Machine production reached approximately 44,643 k units, with an average global market price of around 70 US\$/Unit. The production capacity of Portable Wireless POS Machine reaches 55,800 k units, and the industry's gross profit margin is approximately between 20% and 40%. The market demand for portable wireless POS machines is primarily driven by multiple factors, including the widespread adoption of mobile payments, the surge in digital business needs from micro and small merchants and individual operators, the promotion of a cashless society policy, and the maturity of 5G and IoT technologies. In highly mobile and space-constrained scenarios such as street vendors, food delivery, parcel collection, temporary markets, and door-to-door services, traditional fixed POS equipment struggles to meet the demands for flexible, efficient, and secure transactions. Portable wireless POS machines, integrating 4G/5G/Wi-Fi wireless communication, QR code payment, bank card acceptance, electronic receipts, and cloud-based backend management, significantly improve the payment efficiency and operational intelligence of micro and small businesses due to their advantages such as immediate usability, portability, low-barrier access, and real-time data synchronization.

The global Portable Wireless POS Machine market size was estimated at USD 3125.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

7.50% during the forecast period.
